Strength of materials, also called mechanics of materials, is a subject which deals with the behavior of solid objects subject to stresses and strains. The complete theory began with the consideration of the behavior of one and two dimensional members of structures, whose states of stress can be approximated as two dimensional, and was then generalized to three dimensions to develop a more ...

In classical mechanics, impulse (symbolized by J or Imp) is the integral of a force, F , over the time interval, t , for which it acts. Since force is a vector quantity, impulse is also a vector in the same direction. Impulse

applied to an object produces an equivalent vector change in its linear momentum, also in the same direction. The SI unit of impulse is the newton second (N⋅s), and the ...
