Summary introduction to Wireless LTE* 4G architecture and

4G is the fourth generation of broadband cellular network technology, succeeding 3G. A 4G system must provide capabilities defined by ITU in IMT Advanced. Potential and current applications include amended mobile web access, IP telephony, gaming services, high-definition mobile TV, video conferencing, and 3D television.. The first-release Long Term Evolution (LTE) standard was commercially ...

4G - Wikipedia

4G is the short name for fourth-generation wireless, the stage of broadband mobile communications that will supersede the third generation (3G).

What is 4G (fourth-generation wireless)? - Definition from

An Introduction To Mobile Technologies and Services by Michael Sharon, Co-founder / CTO, Socialight

An Introduction To Mobile Technologies and Services

Much of the LTE standard addresses the upgrading of 3G UMTS to what will eventually be 4G mobile communications technology. A large amount of the work is aimed at simplifying the architecture of the system, as it transitions from the existing UMTS circuit + packet switching combined network, to an all-IP flat architecture system. E-UTRA is the air interface of LTE.

Data Link Layer (Layer Two) LTE is a complex collection of protocol specifications that define how the network functions. In general, there are two types of traffic: control traffic and user traffic. Control traffic organizes how the user traffic is sent and received, whereas the user traffic is the actual payload, e.g., the content of the visited website.
