Biochem/physiol Actions Mode of Action: Chloramphenicol inhibits bacterial protein synthesis by blocking the  
peptidyl transferase step by binding to the 50S ribosomal subunit and preventing attachment of aminoacyl  
tRNA to the ribosome.

Analysis Note The following is a list of properties associated with our agaroses: Sulfate content - used as an  
indicator of purity, since sulfate is the major ionic group present. Gel strength - the force that must be applied  
to a gel to cause it to fracture. Gel point - the temperature at which an aqueous agarose solution forms a gel  
as it cools.

A superalloy, or high-performance alloy, is an alloy that exhibits several key characteristics: excellent mechanical strength, resistance to thermal creep deformation, good surface stability, and resistance to corrosion or oxidation. The crystal structure is typically face-centered cubic austenitic. Examples of such alloys are Hastelloy, Inconel, Waspaloy, Rene alloys, Incoloy, MP98T, TMS alloys ...

Another major improvement to turbine blade material technology was the development of thermal barrier coatings (TBC). Where DS and SC developments improved creep and fatigue resistance, TBCs improved corrosion and oxidation resistance, both of which became greater concerns as temperatures increased.
