The ESM defines the minimum technical requirements for the design, fabrication, construction, commissioning, repair, and replacement of both new and existing systems, structures, and components (SSCs), including both maintenance and modification, for programmatic and facility work. They do not apply retroactively (forcing changes to existing SSCs that are not being touched).

A gas cylinder or tank is a pressure vessel used to store gases at above atmospheric pressure. High-pressure gas cylinders are also called bottles. Inside the cylinder the stored gas may be in a liquid state, dissolved state, or compressed gas. Often, gas cylinders are elongated and may stand upright on a flattened bottom at one end with the valve at the top.

### **Gas cylinder - Wikipedia**

Introduction A pressure relief valve is a safety device designed to protect a pressurized vessel or system during an over-pressure event. An overpressure event refers to any
